

### Agriculture Careers: Reviews on the Farmer's Hard-Earned Agricultural Jobs

They are also working in agro-business industries involving animal milk productions, meat processing, and other related products. They, likewise build some fences or structures to protect the plants and other growing crops. They also monitor the water supply and flow of the water that maintains the growth of the crops, vegetables, and other plants. They even apply some scientific techniques to produce good harvest, and even multiply the number of plants into thousand folds. When pests come to attack and destroy the crops, they need to find the initiative to answer the problem. Oftentimes, the application of chemical spray and enriched fertilizer are the common remedies for such problem.

Moreover, still involved with their [agriculture jobs](#), farm workers focus on the animal care, production of good livestock like cattle, goat and cow-milking, chicken eggs, and other poultry goods ready for market demand. Dairy farms are basically the main supply of animal milk in some of the retail-business market and display-groceries for public consumption. These workers always assure the quality products that they can produce from the animals they feed and care everyday in the farm. Like veterinary works, they monitor the health of the farm animals and other livestock where they apply a required vaccine to counter a possible viral infection among the animals. Government doctors from agricultural department offer consultative services to the farmers. They even provide the proper medications for their sickly animals, and even give free supplemental vitamins to assure their health and survival.

In their daily works of [agricultural jobs](#), [farm](#) plowing, seed-sowing, irrigating, monitoring and sustaining the care produce a good harvest of the products. They need to equip themselves with the necessary tools and other materials to do it. Even heavy equipments may be needed like trucks or tractors, spreader-fertilizer, rakes, thresher, and others. Most of them have to learn how to operate farm machines in dealing with their crop maintenance until its harvest season. They must have the technical know-how on conveyor belt-operation, load-machine, and separators, cleaner and drying machines in order to speed up the work for a more efficient production. In fact, they also expand their skills by learning its basic repair-techniques and trouble-shooting of the machines in order to avoid any stoppage and backlog of works since available technicians may be called-up far away from the farm and may take time to reach their destination.

As part of their [farm employment](#), farm workers also strive to learn the basic driving of vehicles and trucks. These skills necessitate the urgent mobilization of the delivery of their products and farm goods. Operating the vehicles is very important in logistics. They always assure the quality of their finished products, as well as the efficiency of its distribution considering the distance of the location away from the urban or cities. Other farmers from highlands look for ways and initiatives to pull down their harvest from high places, like mountains. They try to invent an improvise cable system where a container is attached into the wire. Harvested goods, like vegetables are then placed in the container or box which then hang-up through a cable system that pulls down their harvest downhill. Likewise, government inspector needs to closely monitor the quality standard of the production, as well as the safety of the foods for public consumption in order to assure that public demands will never be compromised to the risk of the foods they eat. Included in the inspection are the equipment and tools that have been used in the food processing operation. Medicines, fertilizers, and other chemicals have also been applied in order to regulate their quantities that may possibly harm the content of the plants and other produced goods. Hence [agriculture careers](#) have involved the health and safety awareness in the production of foods for public consumption. With their trainings and lectures conducted by some consultative bodies, farmers and agricultural workers have been meeting the food production needs of the people in all aspects of quantity, quality, and safety.
