

## Field Inspector, Disease And Insect Control

Inspects fields to detect presence of noxious insects and plant diseases, applying knowledge of identifying characteristics of insects and diseases: Walks through fields, following standard sampling patterns, and examines plants at periodic intervals to detect presence of insects or diseases. Counts numbers of insects on examined plants or number of diseased plants within sample area. Records results of counts onto field worksheet. Collects samples of unidentifiable insects or diseased plants for identification by [supervisor](#).
